Hackathon Finals - Brief

Welcome

Congratulations!

Your team has successfully completed the Virtual Design Phase and earned a place in the Momentum x Monkey & River Hackathon 2026 Finals.

Over the next two days, you will transform your architecture into a working prototype that demonstrates how AI can make life insurance easier to understand, easier to manage, and more accessible for customers during some of life's most important moments.

Unlike the Virtual Phase, this is an implementation challenge. Judges will assess not only your technical solution, but also how effectively you solve the real customer problem, work as a team, communicate your decisions, and adapt as the event progresses.

Your Objective

Build a working conversational AI companion that helps customers understand and manage their Momentum life insurance policies.

Your solution should demonstrate how AI can support customers through both routine servicing requests and emotionally sensitive situations such as submitting a claim.

Focus on building a solution that is:

- trustworthy
- practical
- secure
- empathetic
- grounded in the supplied policy documentation

Starting Point

You are expected to build upon the architecture developed during the Virtual Phase.

You may modify or replace any part of your original design if you believe a better approach exists.

Judges are interested in thoughtful engineering decisions, not blind adherence to your original architecture.

Available Resources

At the start of the event, your team will receive:

- The complete Myriad Technical Guide
- Updated AI Gateway Guide
- Team-specific AI Gateway credentials
- The customer personas (Appendix A)
- Technical support from Momentum and Monkey & River mentors

The complete policy documentation contains substantially more product rules, exclusions, claims requirements and servicing processes than the sample extracts used during the Virtual Phase. Your solution should make appropriate use of this additional information.

AI Gateway

All AI interactions that form part of your solution must integrate with Momentum's AI Gateway.

The updated gateway guide introduces:

- new gateway endpoint
- team-specific virtual keys
- updated model identifiers
- support for additional models
- documented structured outputs
- usage limits and budget constraints

Refer to the supplied Gateway Guide for implementation details.

Minimum Demonstration

Your demonstration should include the following user journeys where applicable:

- User authentication and role-aware access
- Grounded policy questions
- Quote or alteration scenario
- Self-service policy update
- Claims guidance

Additional functionality may be demonstrated if time permits.

Deliverables

Before final judging, your team must submit:

1. Working prototype
2. Final source code repository
3. Demo presentation (Including the core user journeys)
4. Updated architecture / technical summary (Optional)
5. README containing setup instructions, assumptions and known limitations

Judging

The Finals focus on execution rather than planning. Judges will evaluate your solution using the following criteria:

Criterion	Weight
Problem Understanding	10%
Creativity & Innovation	10%
Practicality & Relevance	10%
User Value & Experience	15%
Technical Execution	20%
Presentation Quality	10%
Team Thinking & Decision Making	15%
Overall Impact	10%

Good Luck

The Finals are designed to simulate the realities of building software for a real client.

Prioritise thoughtfully.

Communicate clearly.

Build confidently.

Most importantly, create something that genuinely improves the experience of someone navigating life insurance.

We look forward to seeing what you build!

Appendix A: Customer Personas

These representative personas illustrate the types of customers your AI companion may support.

Persona 1: Policyholder

Primary Goal

Understand and manage their own life insurance policies.

Typical Needs

- View policy information
- Understand benefits and exclusions
- Update personal details
- Check premium information
- Ask general policy questions
- Start or track service requests

Example Questions

- "What does my policy cover?"
- "When is my next premium due?"
- "Can I update my banking details?"
- "What happens if I miss a payment?"

Persona 2: Financial Adviser

Primary Goal

Assist clients while remaining within their authorised access.

Typical Needs

- View client policy information
- Explain product benefits
- Compare available options
- Prepare for client meetings
- Identify outstanding requirements

Example Questions

- "Show this client's current cover."
- "Which products include disability benefits?"
- "What documentation is still outstanding?"

Persona 3: Life Insured

Primary Goal

Understand benefits relating to the life insured under a policy.

> **Note:** The life insured is not always the policyholder.

Typical Needs

- Understand available benefits
- Clarify policy terms
- Check eligibility requirements
- Understand medical or underwriting processes

Example Questions

- "Am I covered for this condition?"
- "What medical documents are required?"
- "How does my benefit work?"

Persona 4: Beneficiary

Primary Goal

Obtain guidance after the death of a policyholder or life insured.

Typical Needs

- Understand the claims process
- Learn required documentation
- Track claim progress
- Understand expected timelines
- Receive compassionate guidance

Example Questions

- "How do I submit a death claim?"
- "What documents do I need?"
- "How long will the claim take?"
- "What happens next?"

Persona 5: Claims Assessor

Primary Goal

Review claims efficiently using policy information and supporting evidence.

Typical Needs

- Locate policy clauses
- Review claim requirements
- Verify documentation
- Identify missing information
- Access relevant policy rules

Example Questions

- "Does this policy cover the submitted claim?"
- "Which exclusions apply?"
- "What evidence is still outstanding?"

Persona 6: Service Agent

Primary Goal

Support customers quickly and accurately.

Typical Needs

- Answer policy questions
- Locate customer information
- Assist with administrative changes
- Escalate complex requests
- Guide customers through processes

Example Questions

- "Help this customer update their address."
- "How do I reset customer access?"
- "Which team should handle this request?"
