Context-sensitive compliance controls

The solution must prevent the assistant from making guarantees, assurances or promises about an individual customer's:

- claim approval;
- payment date; or
- final payout amount.

This is not a blanket prohibition on the word "guarantee."

The supplied policy documentation contains legitimate formal terms such as "premium guarantee." Teams may use those terms when accurately explaining documented policy provisions.

The restriction applies to unqualified promises or assurances about an individual outcome.

Required behaviour

The assistant may:

- Explain formal policy terms containing the word "guarantee," such as a defined premium-guarantee period, when the explanation is directly grounded in the supplied policy documents.
- Display a recorded contractual benefit amount.
- Display policy values or What-If estimates derived from verified data.
- Explain relevant conditions, exclusions and documentation requirements.
- Explain the claims-assessment process.
- Communicate indicative service timelines.
- Explain what may be payable if defined requirements are met.

The assistant must not:

- State or imply that a claim is guaranteed to be approved.
- Promise that a customer or beneficiary will receive a specific amount.
- Present an estimate as a confirmed payout.
- Present a policy benefit amount as the final amount that will be paid.
- Present an Instant Cash value as confirmed before the required conditions and assessment have been completed.
- Promise an exact payment date.
- Imply that an SLA guarantees approval or payment.
- Use confident language where the outcome may still be affected by:
    - eligibility;
    - policy status;

- documentation;
- underwriting;
- exclusions;
- waiting or no-claims periods;
- outstanding debt;
- beneficiary status;
- cessions;
- validation; or
- claims assessment.

Expected system response

When discussing a possible payout, the assistant must clearly distinguish between:

1. **Recorded or illustrative value**
   The benefit amount, policy value or estimate shown in the available data.
2. **Potentially payable amount**
   What may be payable under the relevant policy terms if the applicable requirements are met.
3. **Confirmed outcome**
   The amount ultimately confirmed after validation and claims assessment.

No amount should be described as final or payable until the appropriate validation and assessment have occurred.
